Delivery, Quality & Global Rollout of the Firm's
Employee Experience Mobile App

Justin Polomcean

Product Delivery Manager, Employee Experience Platforms

June 2024 – January 2026 • Jersey City, NJ

One delivery owner, one mobile app, eight core employee journeys

- Owned end-to-end delivery for the JPMC Employee Experience mobile app — the firm's single front door for badge access, workplace booking, dining, people search, events, and notifications.
- Coordinated a ~60-person cross-functional engineering team spanning iOS/Android native, platform services, and QA across every release.
- Partnered with QA and Product to define, execute, and sign off on user-journey test plans before each go/no-go — from a new-hire's first badge tap to a returning employee booking a room three floors away.
- Drove the shift from a twice-quarterly to a monthly release cadence without loosening the quality bar (see p.10).

THE PRODUCT

The App at a Glance

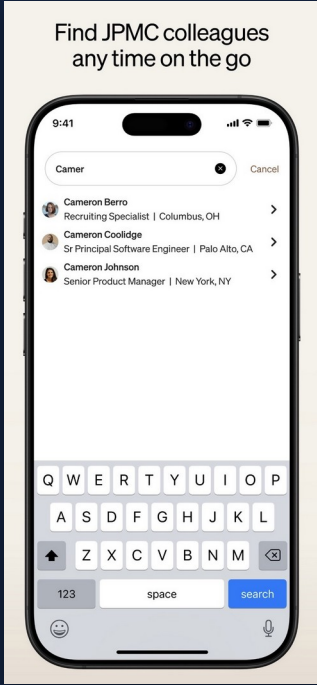

Eight employee journeys, delivered and validated end-to-end

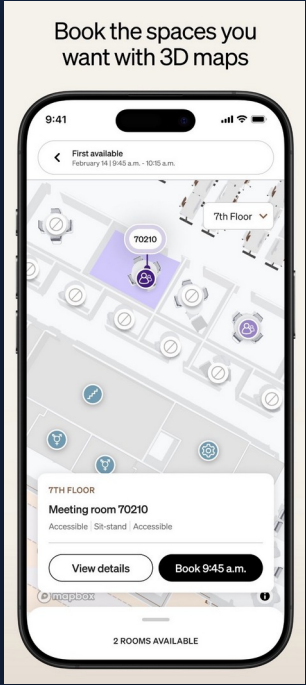

Day at a Glance & Mobile Badge

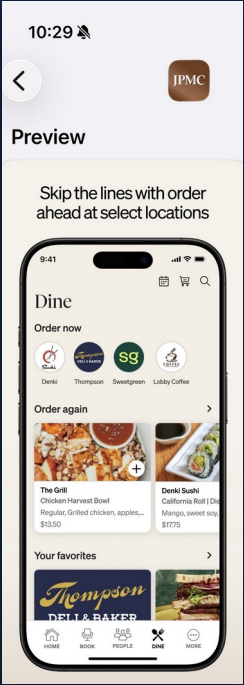

Guest Registration

Colleague Directory

Room Booking (3D Maps)

Dine / Order Ahead

Events & News

FEATURE DELIVERED

Home, Day-at-a-Glance & Mobile Badge

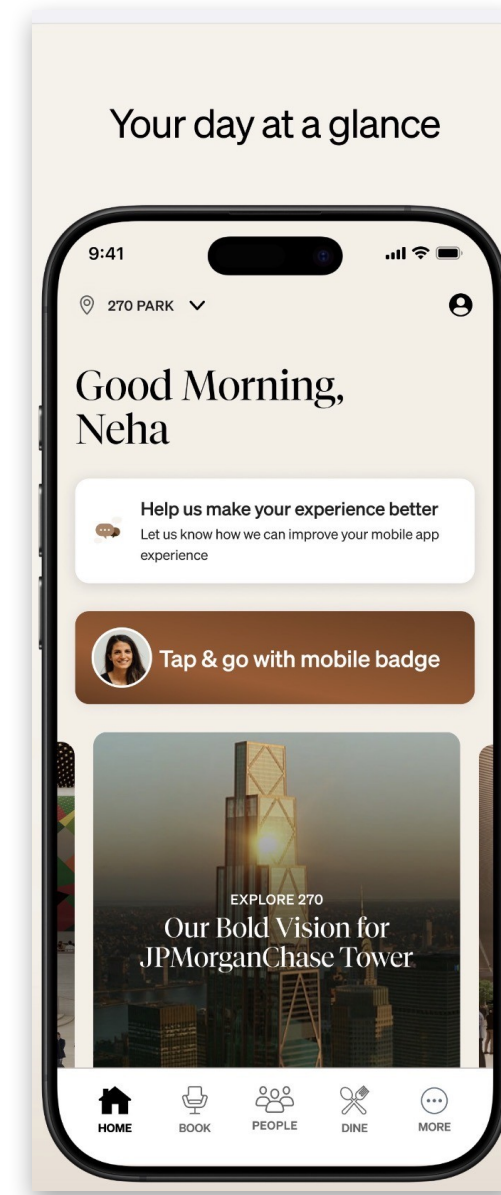

The first-open experience — and the fastest badge-in on the floor.

USER JOURNEY

An employee opens the app at their assigned location each morning, sees a personalized greeting and curated content, and taps once on the mobile badge card to badge into the building — no physical badge required.

MY ROLE — DELIVERY, APPROVAL & QA

- Validated personalization logic across location switching, greeting state, and role-based content cards with QA before each release.
- Approved go/no-go readiness for the mobile-badge provisioning journey in partnership with security and badge-operations teams.
- Coordinated cross-functional UAT covering first-time setup, returning-user, and multi-location employee scenarios.

Guest Registration

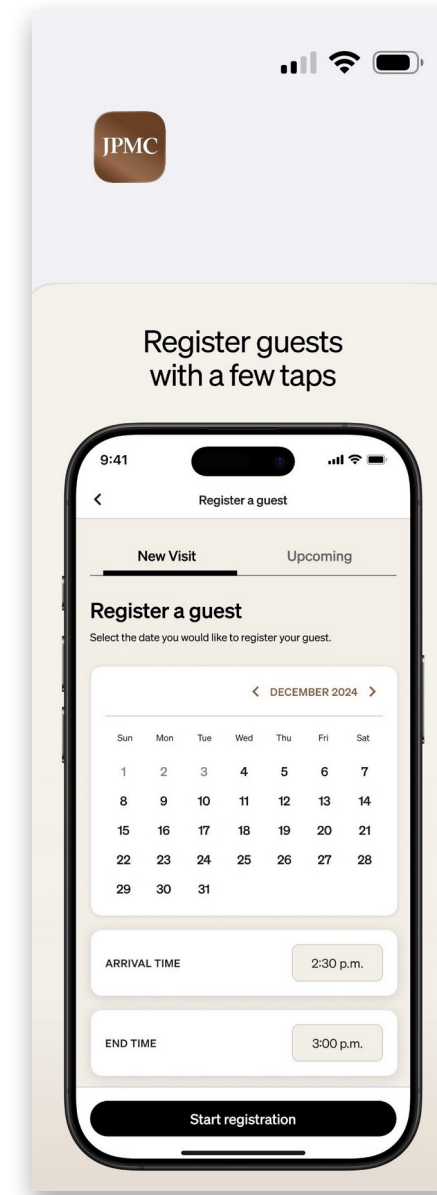

From calendar tap to lobby check-in — the full visitor journey.

USER JOURNEY

An employee registers a visitor ahead of an on-site meeting — selecting date, arrival, and end time — and the visitor is checked in and greeted by name at the lobby without a manual sign-in sheet.

MY ROLE — DELIVERY, APPROVAL & QA

- Wrote and executed journey-based test cases across same-day, multi-day, and recurring-visit registration paths.
- Approved edge-case handling (late arrivals, early departures, guest re-scheduling) ahead of release sign-off.
- Partnered with front-of-house and security stakeholders to validate the registration-to-lobby handoff end-to-end.

FEATURE DELIVERED

Colleague Directory

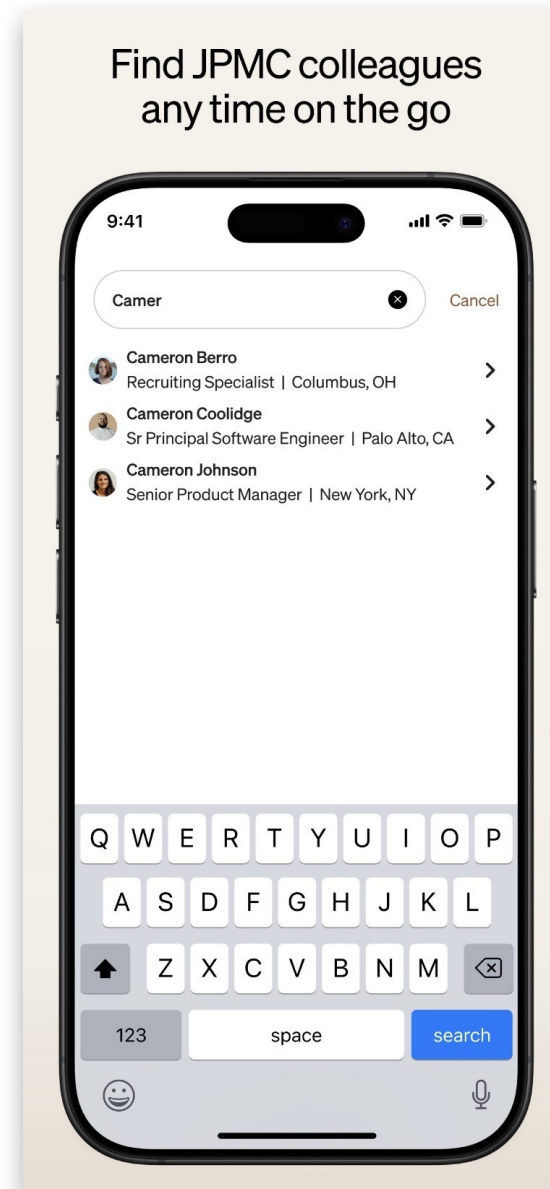

Enterprise people search, built for a global workforce.

USER JOURNEY

An employee searches for a colleague by name from anywhere in the building, gets typeahead results with role, title, and location, and taps through to the colleague's profile card.

MY ROLE — DELIVERY, APPROVAL & QA

- Tested search relevance and typeahead accuracy across role, title, and location attributes ahead of every release.
- Validated directory data integration accuracy against the firm's identity source of record.
- Signed off on release readiness for the search journey across desk-based and mobile-first user segments.

FEATURE DELIVERED

Room Booking with 3D Maps

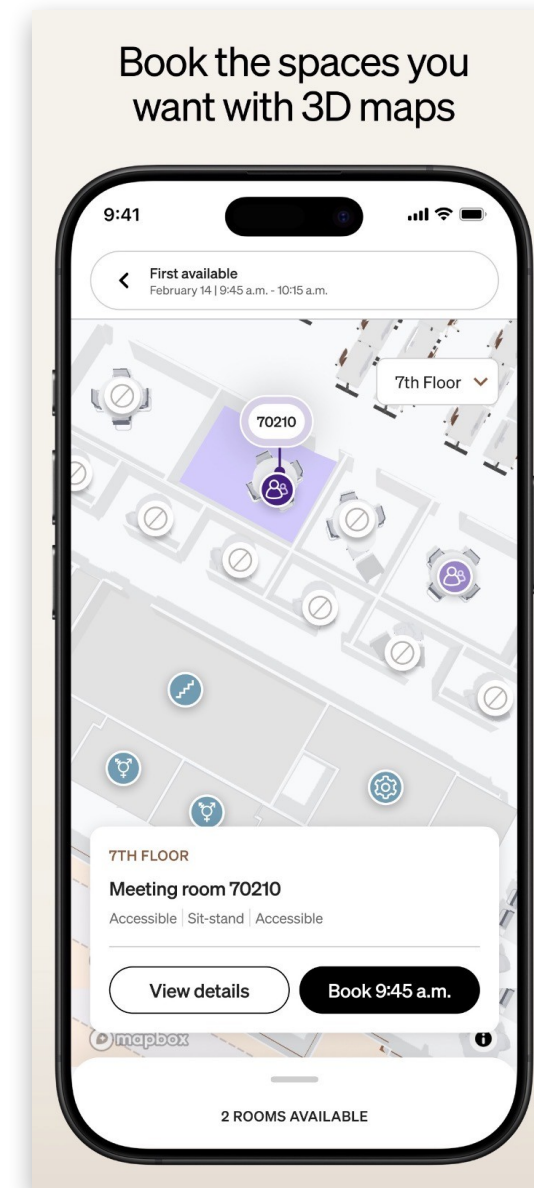

Interactive floor maps that turn 'find a room' into one tap.

USER JOURNEY

An employee needs a room in the next fifteen minutes — filters by accessibility and sit-stand needs on an interactive 3D floor map, and books the nearest available space in a single tap.

MY ROLE — DELIVERY, APPROVAL & QA

- Coordinated QA of floor-plan data accuracy on a building-by-building and site-by-site basis ahead of rollout.
- Tested booking-conflict handling, first-available logic, and accessibility filters across device types.
- Approved the 3D map rendering journey for release across the first wave of instrumented buildings.

FEATURE DELIVERED

Dine / Order Ahead

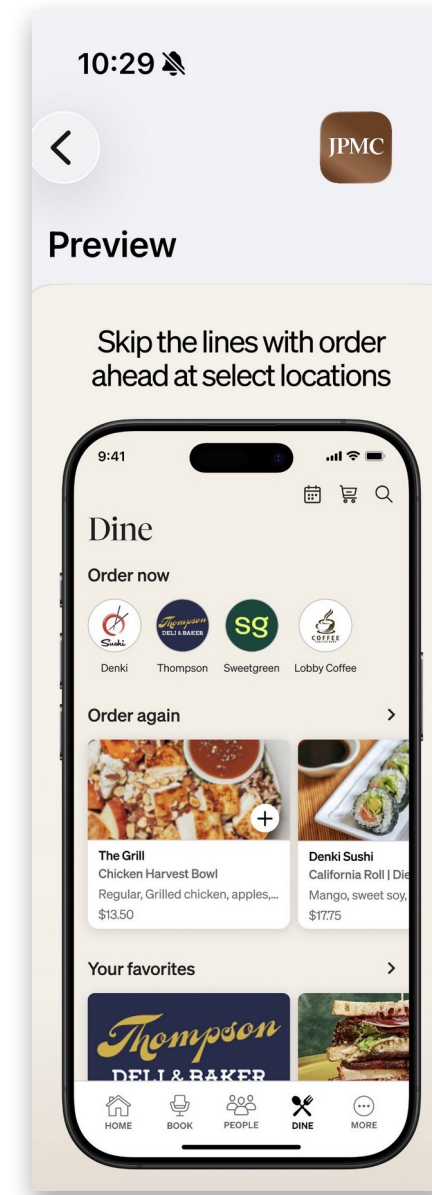

Skip the line — order, pay, and pick up on your schedule.

USER JOURNEY

An employee orders lunch ahead from an on-site vendor, pays in-app, and receives a real-time notification the moment the order is ready for pickup at a designated station.

MY ROLE — DELIVERY, APPROVAL & QA

- Tested end-to-end checkout and payment flows across every participating vendor ahead of launch.
- Validated vendor menu synchronization and 'order again' / favorites accuracy across releases.
- Ran cross-team UAT with dining operations to confirm order-ready notification timing under real traffic.

FEATURE DELIVERED

Events, News & Notifications

The right update, to the right person, at the right moment.

USER JOURNEY

An employee is served firmwide events relevant to their role and location, and receives real-time lock-screen alerts — a visitor arriving, an order ready — without opening the app.

MY ROLE — DELIVERY, APPROVAL & QA

- Validated notification trigger logic and timing accuracy for visitor-arrival and order-ready alerts.
- Tested location- and role-based content targeting for the events and news feed prior to each release.
- Approved production readiness of the notification service ahead of its extension into the global rollout.

Events and news for you
based on location and role

A Shorter Release Cadence, With No Trade-off on Quality

BEFORE

Twice-Quarterly

~8 releases per year across the ~60-engineer delivery train.

AFTER

Monthly

12 releases per year — a 50% increase in delivery frequency.

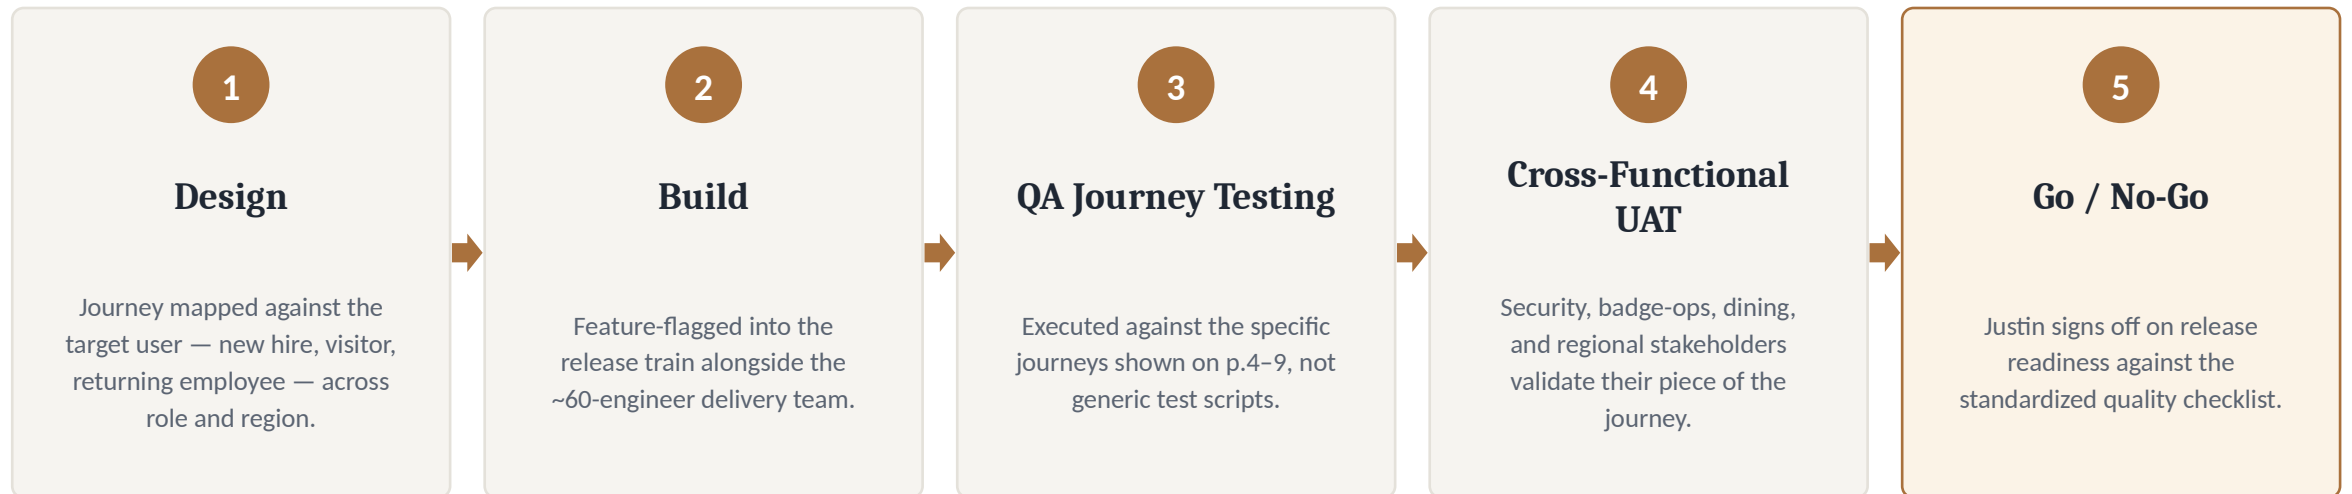

HOW WE GOT THERE

- Aligned CI/CD pipeline gating to feature-flagged, journey-based releases instead of monolithic quarterly builds.
- Folded automated regression suites into the pipeline so higher release velocity never bypassed journey-level testing.
- Standardized a single go/no-go checklist across all ~60 engineers, so every team shipped against the same quality bar.

Outcome: release frequency increased 50% with zero change to the QA journey-sign-off bar required for go-live.

QUALITY & SIGN-OFF

Every Journey Tested, Approved, and Signed Off Before It Shipped

Approach: every feature was validated against the real user journey it served — not a generic script — before it was cleared for release.

A Phased Rollout Across Four Global Regions

What Shipped, and What It Took

8

Core employee journeys
delivered
end-to-end — home, badge,
guest,
directory, rooms, dine, events,
notifications

~60

Engineers coordinated across the
release train, aligned to one
quality checklist

4

Global regions phased into
rollout — NAM, EMEA, APAC,
LATAM

+50%

Increase in release frequency —
twice-quarterly to monthly, with
no change to the QA sign-off bar

Role summary: helped deliver, approve, and QA-test every core journey in this deck — across four global markets — while compressing the team's release cadence with no drop in quality.

Work at JPMC

Delivery, quality, and a phased global rollout —
owned end-to-end by the Product Delivery Manager, Employee Experience Platforms.
